

**Amendments to the Specification:**

Please replace the paragraph beginning at page 8, line 23 with the following rewritten paragraph:

When either the STOP or PAUSE button is activated on the panel 74, the panel 74 persists on the screen, but the highlighting is switched back to PLAY. (If the PAUSE button is used to resume playback following a pause instruction, and the user activates the PAUSE button to interrupt the video, the highlighting can remain at the PAUSE button.) This arrangement permits the viewer to resume playback simply by pressing "Go" on the remote, since the button that resumes playback is already highlighted. (The panel similarly persists on-screen if the REWIND or FAST ~~FORARD~~ FORWARD button is activated, with PLAY next highlighted.)
